

vario wet gate option

The full submerge Wet Gate for MWA Vario provides a real time dust and scratch removal during scanning 35mm or 16mm historical film material furthermore it is fully controlled by flashsuite 2 software. Existing Varios can be retrofitted with the MWA Wet Gate and will become a significant component of the scanning process.

The design will address the needs of film archives to handle a wide range of historical and aged film.

Special designed aspirators on the exits of the MWA Wet Gate guarantees a perfect dry film in forward operation, ready for getting back to the store.

In contrast to other existing Wet Gate systems the MWA Wet-Gate provides a minimum of odor nuisance.

Wet Gate Features

- Pinless / sprocketless
- up to 25 fps scanning speed
- Edge to edge aperture / edge cover available
- Plug on/off easy to change

Highest requirements to health, work safety and environmental handling

- Installed in a lockable safety cabinet with air extraction adaptors
- Perchloroethylene (PERC) supply unit with a closed loop circuit and double-walled safety container system by Richard Geiss GmbH for safe handling and storage of fresh liquid and take back used liquid.
